COURSE CODE: **K234_1**

Biological, psychological and social complexities in childhood development

<https://www.open.edu/openlearn/health-sports-psychology/biological-psychological-and-social-complexities-childhood-development/content-section-0>

Course summary

This free course uses the case studies of Liam, Chloe and Lola to explore childhood development and some of the biological and psychological conditions that can affect children and young people. You will focus on asthma, intellectual and development disorders, depression and anxiety, and eating disorders.

Learning outcomes

By completing this course, the learner should be able to:

- explain biological changes and the pathophysiology of childhood asthma
- understand the experience of parents and children in childhood asthma
- explain how mental health affects children and young people
- understand the experience of using mental health services as a young person.

Completed study

The learner has completed the following:

Section 1

Childhood asthma

Section 2

Intellectual and developmental disorders

Section 3

Child and adolescent mental health

Section 4

Mental health and social media

Section 5

Conclusion
